Blood pressure

Measuring blood pressure under anaesthesia is great, but what to do when your readings are abnormal? In this lecture, all the different scenarios and action plans will be discussed and you will realise that there are more options than just giving a fluid bolus!

Placement of Naso-oesophageal tubes

When, how, what and where will be explained in an easy to follow step by step guide, giving you the confidence to place them in your patients in the future. Then RER calculations will be discussed in depth with hints and tips for everyday use.
