Lecturer in Neurology and Neurosurgery  
The Royal Veterinary College, London, United Kingdom

### **Neurology Year-in-Review**

In this session we will discuss key papers in the field of veterinary neurology published in the previous year. We will focus on topics relating to conditions encountered in emergency and critical care, and particularly those that have seen particular emphasis or controversy in the last 12 months. We will review the learning points from each publication, how these can be applied to clinical practice and what questions remain to be addressed.

#### Learning goals:

1. Refresh on recent literature relating to Veterinary Neurology
2. Identify key take home messages from pertinent papers
3. Develop skills in critical analysis of the veterinary literature
