

## Vicente Herrería-Bustillo

### Urgent reversal of anticoagulation

We will address the critical need for emergency reversal of anticoagulation in dogs and cats. With the escalating use of anticoagulants in veterinary practice, timely interventions are paramount. We'll emphasize the diverse strategies required, tailoring interventions to specific anticoagulant types and individual patient characteristics. This presentation aims to underscore the urgency and complexity of managing anticoagulation-related emergencies in our furry companions, providing veterinarians with a comprehensive understanding of the evolving landscape in this crucial aspect of veterinary care. Join us as we explore the nuanced approaches to ensure the well-being of our animal patients in the face of anticoagulation challenges.(1)(1–11)
